

# User Guideline

## The Backtail Line

The Backtail Line is a complex spliced line made of Dynema and Polypropylene in different diameters and colors for optimal function.

It is light, flexible, do not absorb water and is strong where strength is needed. This guideline shows the principle of the Backtail Line fitted on a gennaker with two patches.

The Backtail Line gives you a windward drop in no time after an urgent jibe.

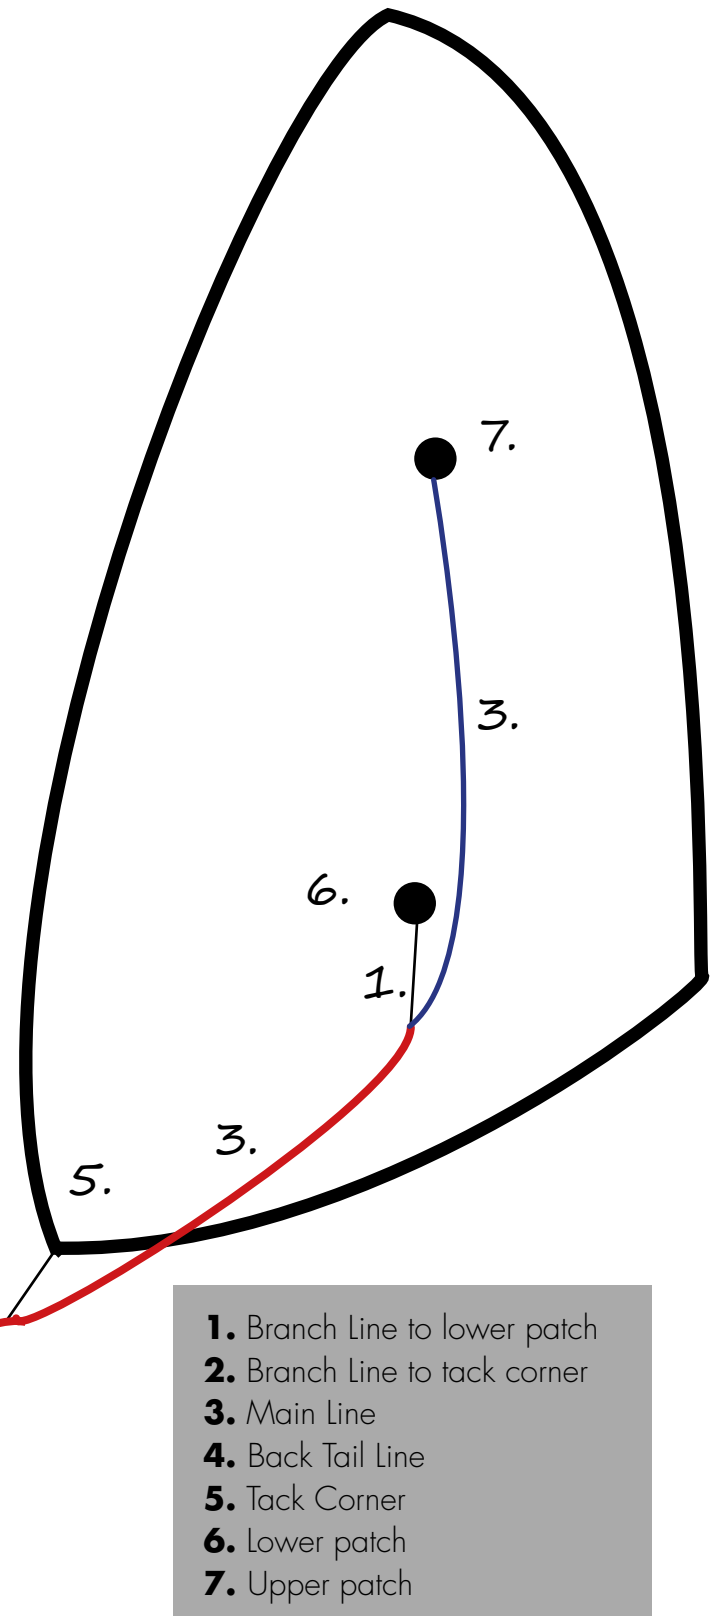

Based on the blueprint of your gennaker, telling where in your gennaker the patches are mounted, we will tailor the Backtail Line for your gennaker.

Backtail Line for J80

Branch Line

1. Branch Line to lower patch
2. Branch Line to tack corner
3. Main Line
4. Back Tail Line
5. Tack Corner
6. Lower patch
7. Upper patch
